

# Datenexport am Beispiel SCHILD

The image illustrates the process of exporting student data from the SCHILD software. It shows the following steps:

- The main SCHILD interface displays a list of students and a detailed view of a student record.
- The 'Datenexport' dialog is used to select 'Schüler' and choose specific fields for export (Nachname, Vorname, Klasse).
- The 'Export-Optionen' dialog is used to specify file format options, including 'Datei im Unicode-Format erzeugen' (Create file in Unicode format).
- The 'Export-Datei wählen' dialog is used to select the save location as 'Desktop' and name the file 'LLMS.xlsx'.
- The final step shows the 'Downloads' folder in the file explorer, where 'LLMS.xlsx' is listed, indicating the export was successful.

**Die Excel-Datei kann anschließend via „speichern unter“ ins CSV-Format umgewandelt werden.**
